

jetNEXUS Load Balancer

For Fast, Scalable,
Resilient Applications

“

Our business is always growing, and as such we're likely to add more off-site servers for greater capacity and resiliency.

jetNEXUS will enable us to expand our requirements both quickly and cost effectively.

Addison Lee

Who is jetNEXUS?

jetNEXUS is a British load balancing vendor passionate about building good value, high performing load balancers that are feature-rich, easy to use and deliver real results.

jetNEXUS Technology

jetNEXUS load balancers mitigate the risk of downtime, improving the performance, scalability and reliability of applications for a superb end user experience. Perfect for Enterprise applications such as MS Exchange and Lync, or self-service websites or browser-based applications, particularly where user experience is key.

Key Benefits

- Load balance traffic across multiple application servers for high availability
- Reduce load on web servers and improve application performance
- Reverse Proxy functionality
- Advanced toolkit to help solve complex web application delivery problems

Why jetNEXUS?

This is mission critical technology and we've got years of experience focused solely on developing our solution.

Price:Performance: jetNEXUS brings you the advanced functionality and power of an application delivery controller (ADC) at a cost-effective price point.

For Your Business Critical Applications: jetNEXUS works alongside leading technology partners and has years of experience across a range of applications and an intimate understanding of their individual requirements.

Automatic Configuration: Deploy jetNEXUS for a wide array of applications in less than a minute thanks to our jetPACK automatic-configuration templates.

User Friendly: With an intuitive user interface and simple drag-and-drop functionality, jetNEXUS is easy-to-deploy, simple to configure and effortless to manage.

Advanced Capabilities: jetNEXUS delivers an advanced and comprehensive feature set as standard, without complex modules or impenetrable licencing models.
